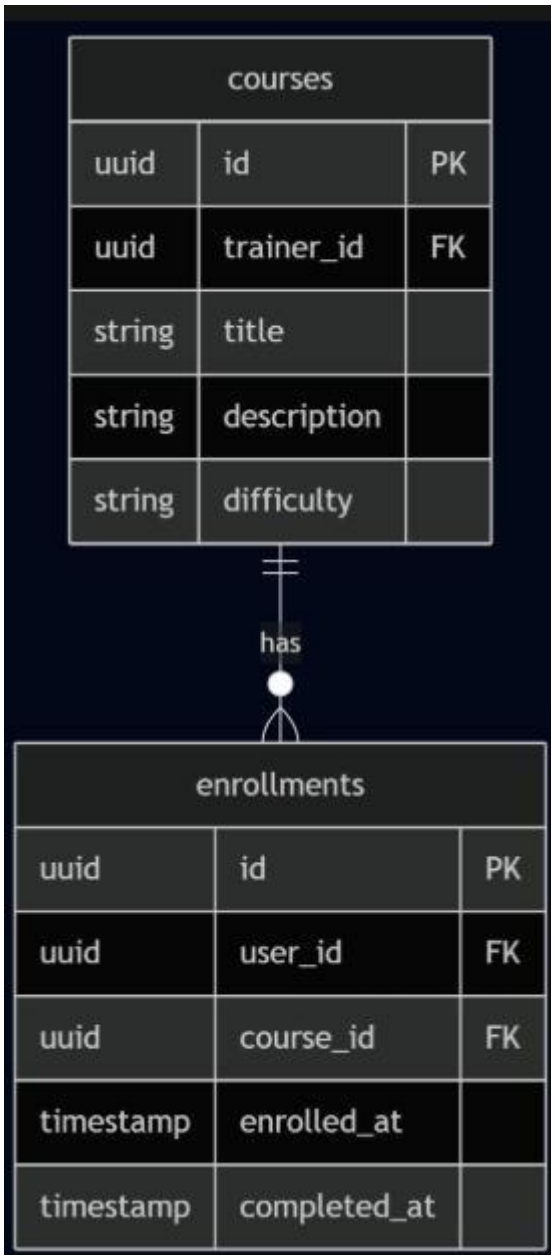
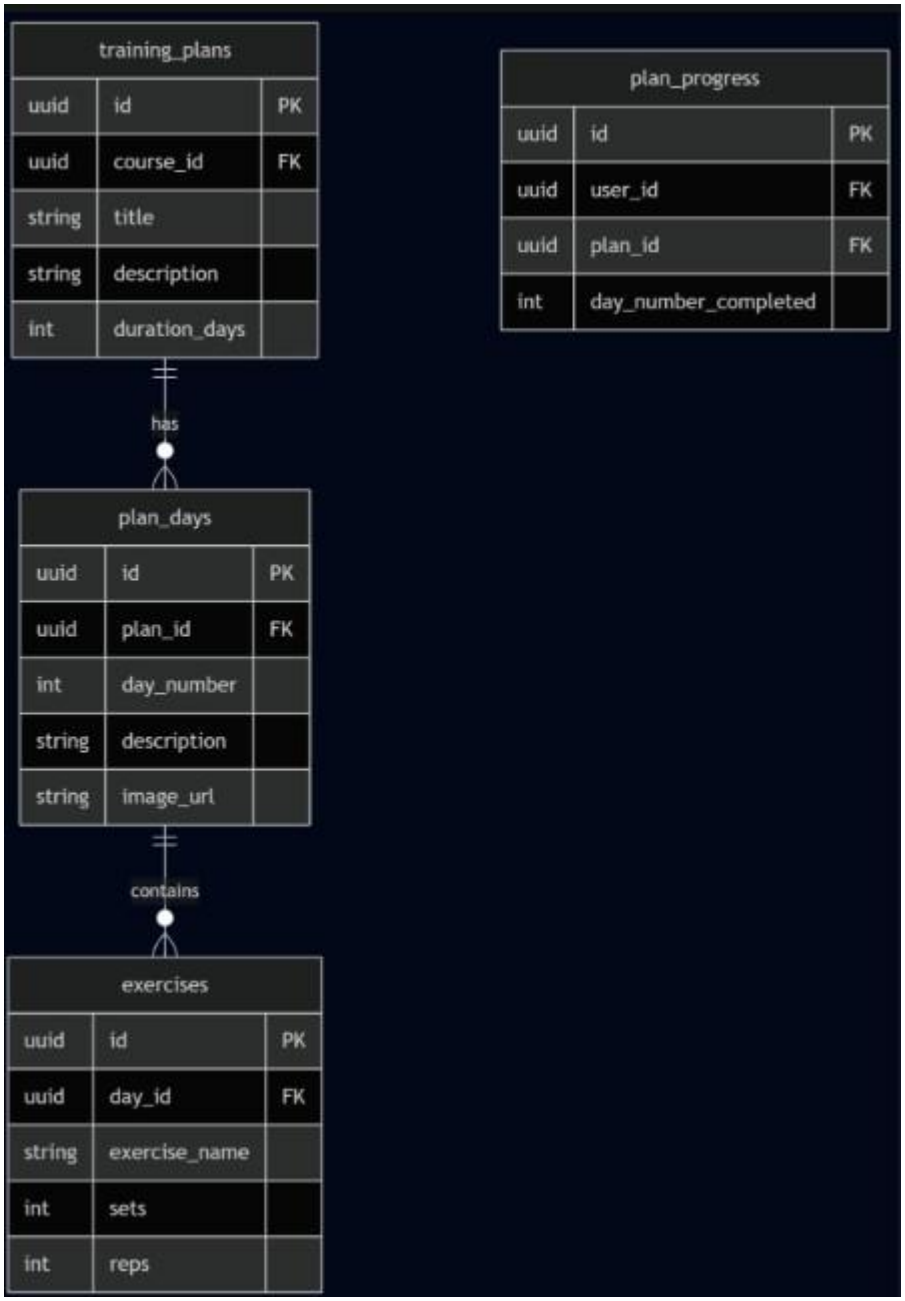
My ERD Diagram:



courses — each course available on the site. Links to the trainer who runs it and stores title, description and difficulty. When a user gets a package they gain access to courses. This is the container that training plans live inside.

enrollments — records which user is enrolled in which course. Created when a user selects a course, and updated when they complete it.



training_plans — now lives inside a course via course_id. Each course can have one or more training plans. Stores the title, description and how many days the plan runs.
plan_days — each individual day within a plan. Has a day number, description of what to do that day, and an image to guide the exercise. exercises — the specific exercises within a day. Each has a name, sets and reps. A day can have multiple exercises.
plan_progress — tracks how far a user has gotten through a specific plan so the site knows where to resume them.

Business Rules:

FORGE FITNESS

Business Rules

1.User Authentication and Registration :

1.1 A new member should provide their ID for verification and create a password.

1.2 Password must meet the systems security requirements (min. length characters).

1.3 A user may only get access to member-only features when their membership is active and verified.

1.4 The system should verify login credentials before giving access.

1.5 User are only allowed to edit their own profile they are logged in with.

2.Membership :

2.1 User must be a registered and verified member of the gym to access membership.

2.2 Memberships are provided in various ways depending on the type of member.(Student , normal citizen, or elderly).

2.3 Memberships automatically expire at the end of the package duration.

2.4 Members may upgrade their package at any time, however downgrading is only permitted at the end of the current billing cycle.

2.5 A member may terminate their membership through their profile settings ; their data will be archived into the database and access will be revoked.

3.Packages :

3.1 Only verified and registered members can buy packages.

3.2 Each package must have a defined price , description and duration .

3.3 A member can only have one package at a time (active package).

4.Courses

4.1 Course content should be evaluated before being published.

4.2 Each course should have a title and description .

5. Personal Trainers Information :

5.1 Trainer profile should be provided with a name , qualification and background.

5.2 Only registered trainers may edit their own profile.

5.3 Trainers profiles are visible to all users. (registered or not registered)

5.4 Each trainer has a maximum capacity of assigned members to ensure quality of service.

5.5 Trainers and members can communicate only through the system's internal messaging feature to ensure privacy and record – keeping.

6. Payments and future billings :

6.1 Users pay a registration fee when signing up.

6.2 All package purchases must be recorded in the billing system.

6.3 Users should receive a email when registration was successful.

6.4 Admin may generate and review billing reports.

7. Admin Controls :

7.1 Only administrators are allowed to add and update or even delete members accounts.

7.2 Only administrators may update packages , courses or trainers details.

7.3 Administrators have enhanced privileges on their accounts.

7.4 All changes made by administrators must be logged for audit purposes.

8. System Management

8.1 The System must store all user and membership information in the database.

The System must back up data regular to prevent risk of losing all data.

I was responsible for point 3.

Individual Reflection:

Working on the *Forge Fitness* website project was both an exciting and rewarding experience for me. My role in the project, alongside my partner Imaad, was mainly focused on designing and developing the **Training Plans** and **Training Videos** pages. We decided to take responsibility for these sections because fitness is something we are both genuinely passionate about and experienced in. Our knowledge of different training styles, workout programs, nutrition, discipline, and the commitment required to achieve fitness goals allowed us to contribute meaningful and realistic ideas to the website.

One of the most enjoyable parts of the project was being able to apply real-life fitness knowledge into a digital platform that could potentially help and motivate others. We carefully considered how different users would interact with the training content and aimed to create pages that were both informative and easy to use. By understanding the importance of proper workout structure, recovery, and nutrition, we were able to design training plans that felt practical and authentic rather than generic.

Another important contribution I made to the project was assisting with the wireframes and layout planning of the pages. From previous projects, I already had experience creating wireframes, which made this process much smoother and more efficient. This experience helped me confidently organize page elements, improve navigation flow, and think more from the perspective of the end user. Although I had prior knowledge, this project still allowed me to strengthen my design skills and gain a better understanding of how planning and structure contribute to the success of a website.

Throughout the project, I also improved my teamwork and communication skills. Collaborating with Imaad allowed us to share ideas, solve problems together, and combine our strengths to produce better results. We constantly discussed ways to improve the user experience and ensure the website reflected the identity of *Forge Fitness* as a motivating and professional fitness platform.

Overall, this project was a valuable learning experience because it combined both my technical abilities and personal interests. It gave me the opportunity to apply my creativity, fitness knowledge, and design experience in a practical environment. I not only became more confident in my ability to contribute to website development projects, but I also gained a deeper appreciation for the planning, teamwork, and effort required to create a successful and user-friendly website.
