BUSINESS RULES: 3
ERD DIAGRAM: 5
WIREFRAMES: 7
REFLECTION: 9

BUSINESS RULES:

1. **1.User Authentication and Registration:**

1.1 A new member should provide their ID for verification and create a password.
1.2 Password must meet the systems security requirements (min. length characters).
1.3 A user may only get access to member-only features when their membership is active and verified.
1.4 The system should verify login credentials before giving access.
1.5 User are only allowed to edit their own profile they are logged in with.

2. **2.Membership:**

2.1 User must be a registered and verified member of the gym to access membership.
2.2 Memberships are provided in various ways depending on the type of member. (Student, normal citizen, or elderly).
2.3 Memberships automatically expire at the end of the package duration.
2.4 Members may upgrade their package at any time; however, downgrading is only permitted at the end of the current billing cycle.
2.5 A member may terminate their membership through their profile settings; their data will be archived into the database and access will be revoked.

3. **3.Packages:**

3.1 Only verified and registered members can buy packages.
3.2 Each package must have a defined price, description and duration.
3.3 A member can only have one package at a time (active package).

4. **4.Courses and Videos:**

4.1 Course content should be evaluated before being published.
4.2 Each course will include min one video.
4.3 Videos will be provided for explanation purposes only.
4.4 Videos will be provided only to active members.

5. Personal Trainers Information:

5.1 Trainer profile should be provided with a name, qualification and background.

5.2 Only registered trainers may edit their own profile.

5.3 Trainer profiles are visible to all users. (registered or not registered)

5.4 Each trainer has a maximum capacity of assigned members to ensure quality of service.

5.5 Trainers and members can communicate only through the system's internal messaging feature to ensure privacy and record – keeping.

6. Payments and future billings:

6.1 Users pay a registration fee when signing up.

6.2 All package purchases must be recorded in the billing system.

6.3 Users should receive an email when registration was successful.

6.4 Admin may generate and review billing reports.

7. Admin Controls:

7.1 Only administrators are allowed to add and update or even delete members accounts.

7.2 Only administrators may update packages, courses or trainers' details.

7.3 Administrators have enhanced privileges on their accounts.

7.4 All changes made by administrators must be logged for audit purposes.

8. System Management

8.1 The System must store all user and membership information in the database.

8.2 The System must back up data regular to prevent risk of losing all data.

I am in charge of the "Membership" or number 2 section of the business rules.

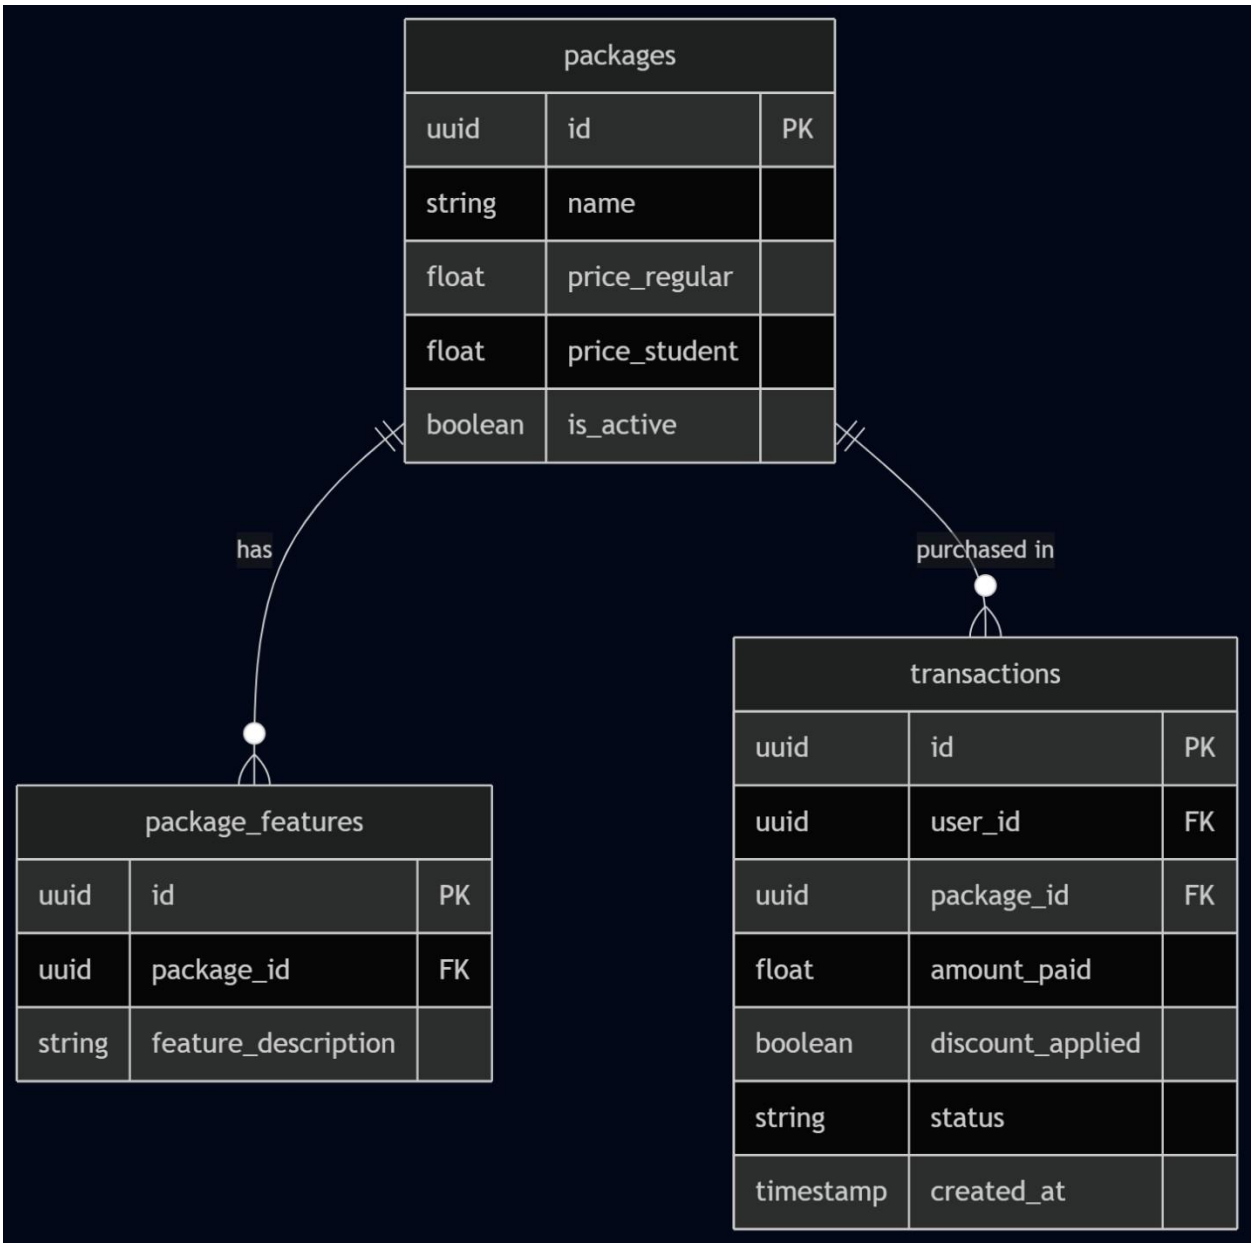
ERD DIAGRAM:

PACKAGES AND BILLING



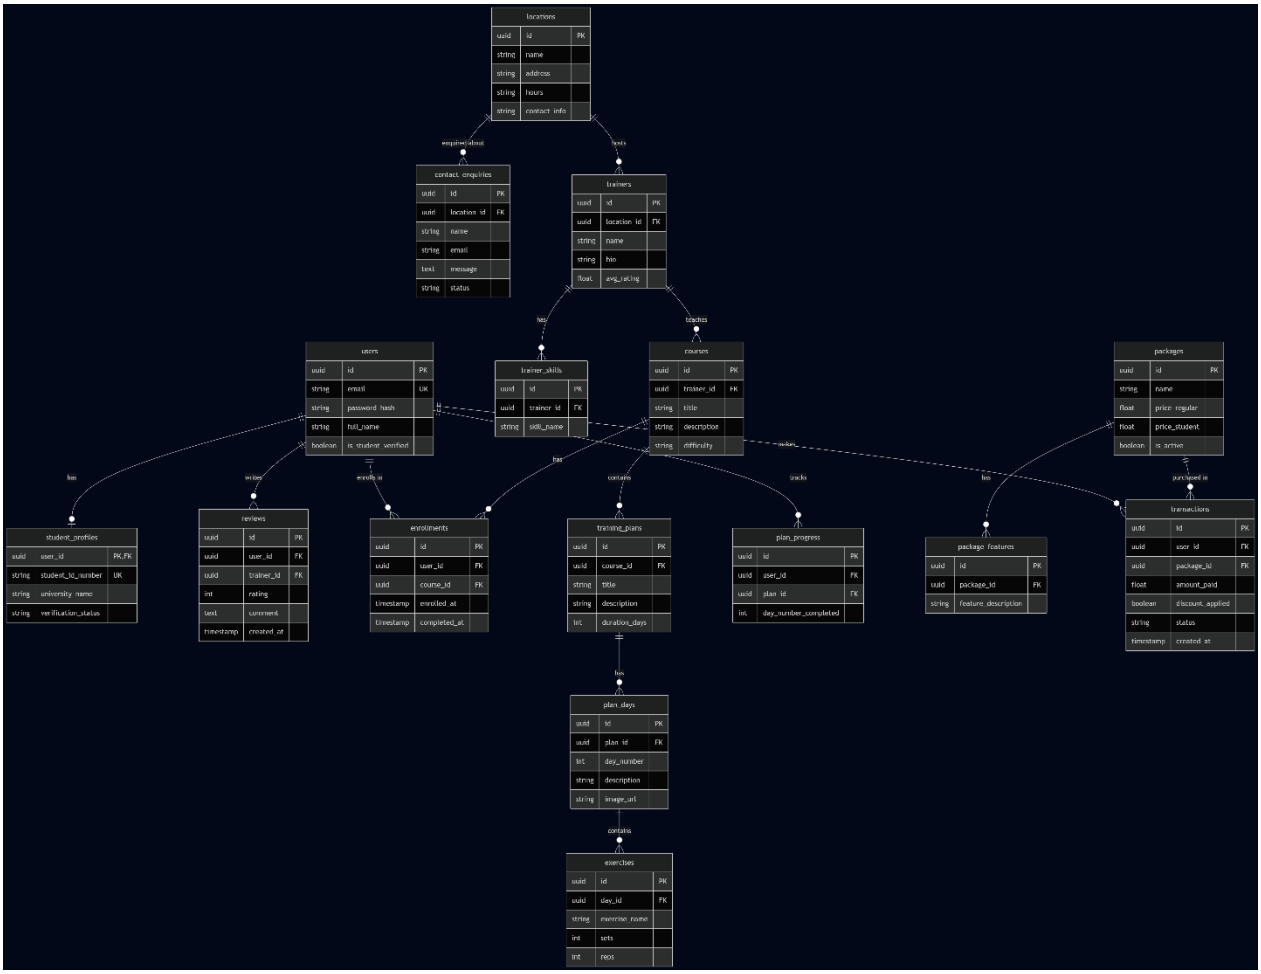
The Packages and Billing module is responsible for managing the membership tiers available on the site and recording all payment activity made by users. The “packages” table stores each membership option the gym offers, holding both a regular price and a discounted student price, as well as an active flag that allows the gym to enable or disable a package without deleting it.

The “package_features” table stores the individual features listed under each package as displayed on the Packages page, such as course access levels or trainer session allowances. When a user selects a package and completes payment, a record is created in the “transactions”

table which logs the user, the package purchased, the amount paid, whether a student discount was applied, and the status of the payment.

This module connects directly to the Auth module since a user must be logged in and their student verification status must be checked before a discount can be applied. It also indirectly governs access to the Courses and Training Plans modules since the package a user holds determines what content they are able to unlock on the site.

The Billing page handles the payment interaction itself while the Packages page handles the selection and display of available tiers.



Above is the full ERD, showing the relationships between all tables.

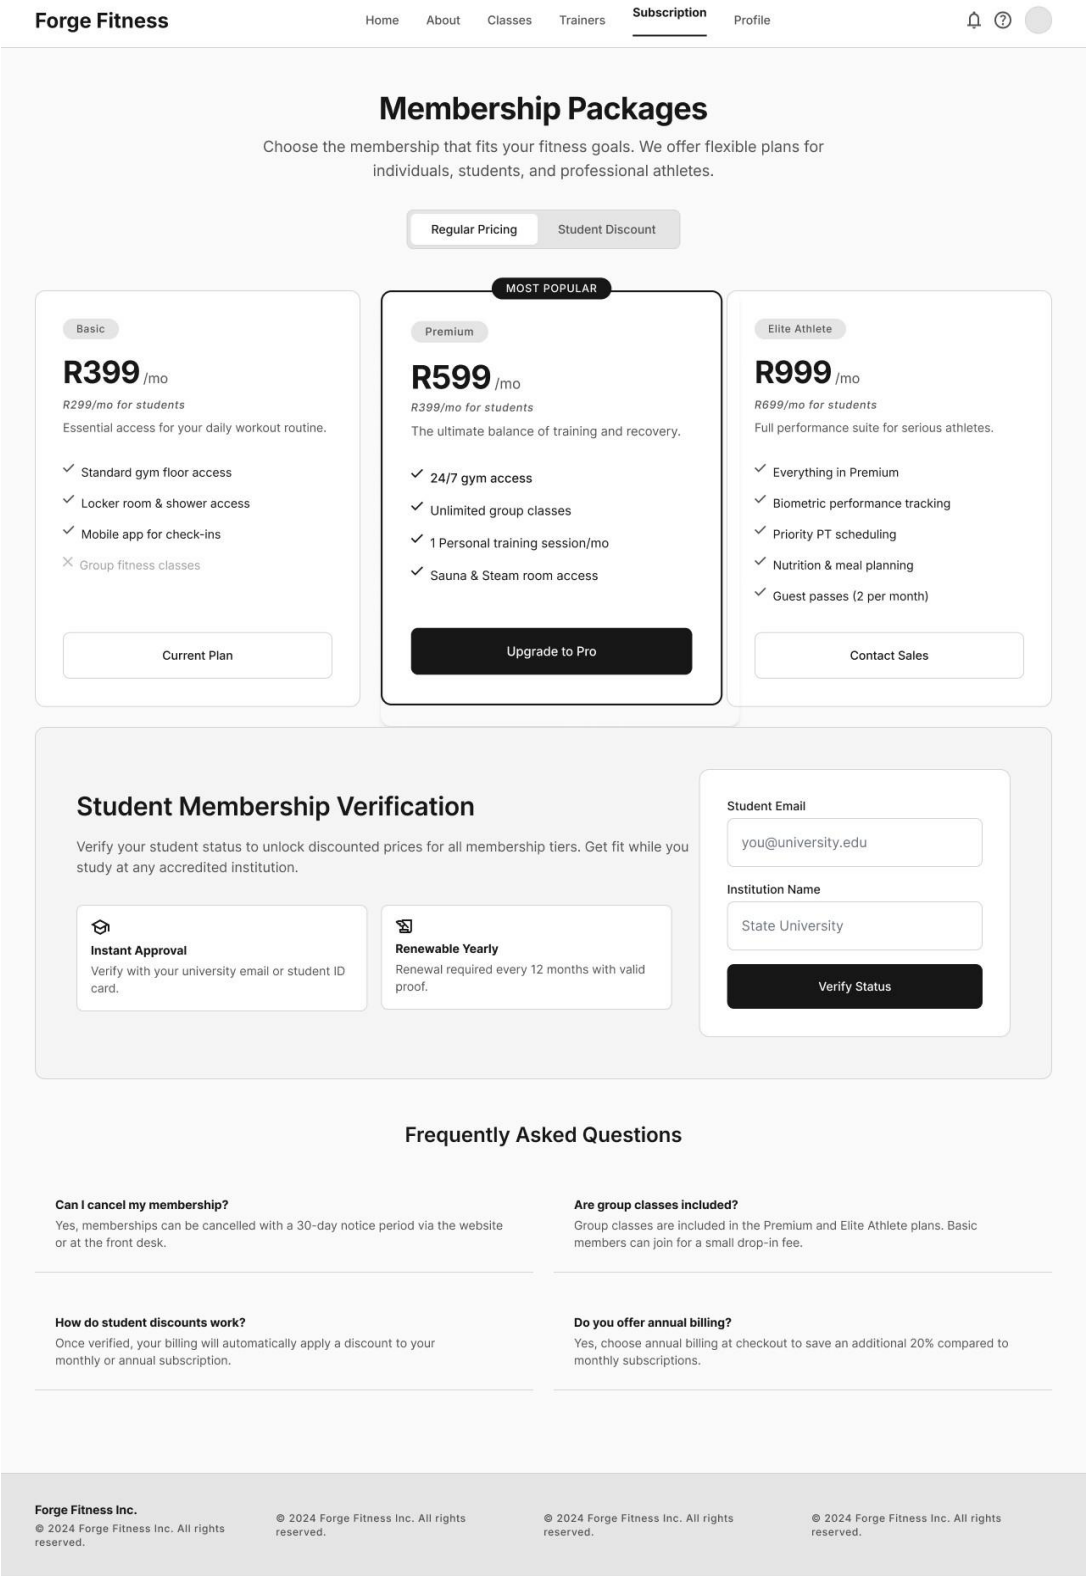
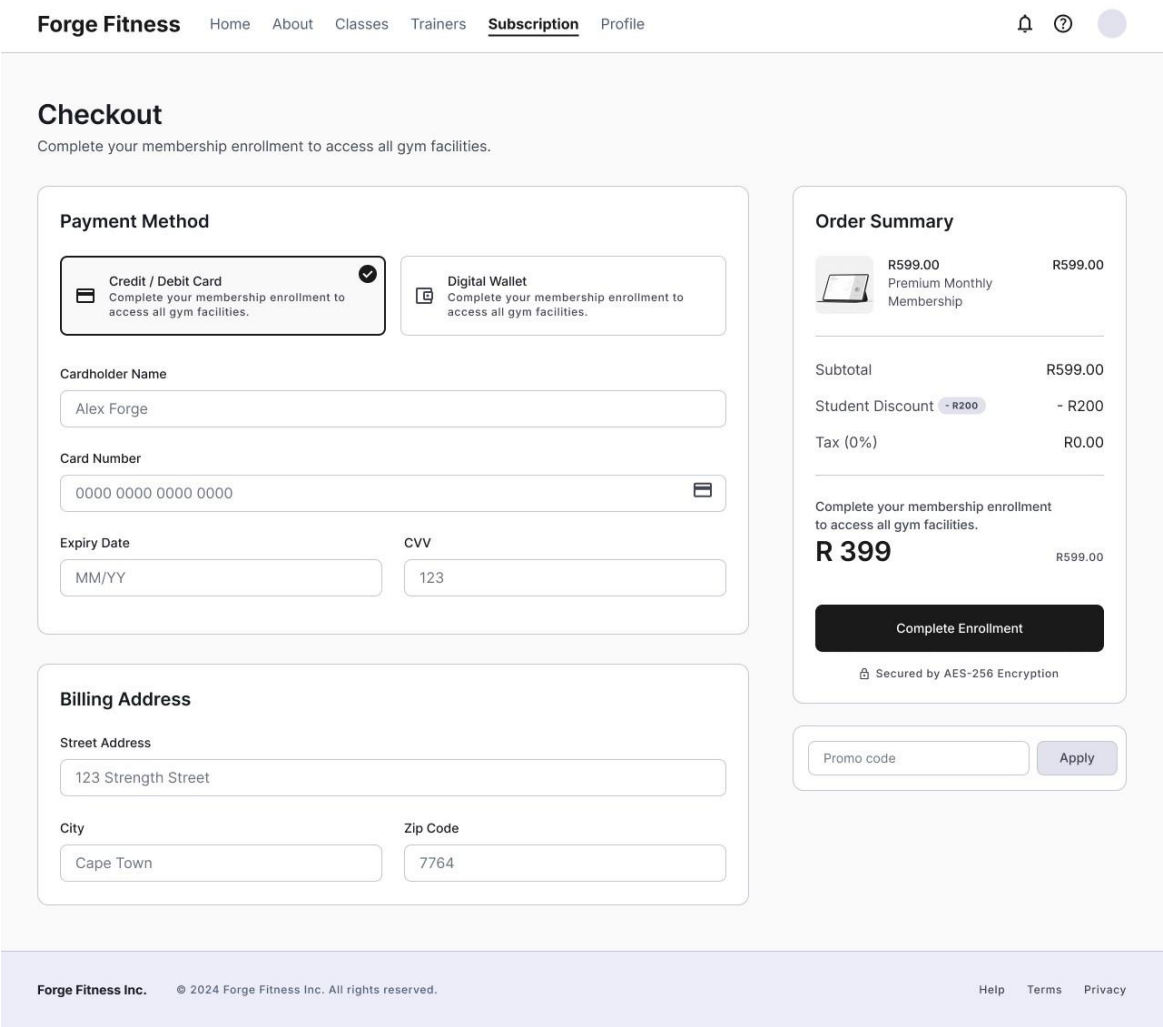
WIREFRAMES:





Above are two of my five screens that I am in charge of working on.

The first is the packages screen. This is where the user will select a package of their choosing (ranging in tiers) and will also have the option to register their student details which will allow for significant discounts on all packages as long as their academic status is verified.

The second is the checkout screen where the user's details are entered. The details will primarily be things relating to personal information such as card details and their address. On the right hand side of the screen all current purchase and discount information will be shown, with the option to complete their enrolment into courses that are available in their package set.

These are just test layouts to see what works best. Below are the colour options we have available.

Our group has taken a liking to the third color scheme that has a lot of blue present so currently that is our main option for our designs.

REFLECTION:

ROLE IN THE GROUP:

My current roles in the project are being in charge of the packages and billing pages on the website. All screens relating to transactions that happen on the website are my job to make. Functions such as allowing a student to verify their academic status, input personal and financial details such as address and account information are all within the scope of my section in the website.

I am also the team communicator as decided by my group leader. What this means is that I took the initiative to create viable and logical methods of communication between the group.

This includes: creating a Discord server with channels dedicated to resources we use as a group, an updates channel that is webhooked to our GitHub repo to allow any pull requests to show as popups and creating polls over either GitHub or WhatsApp to allow for more group decisions even if meetings aren't happening on the day.

Raul Ja'aim Everts 230270565

EXPERIENCE:

My opinion on the current experience in this group is that there is little communication happening even though I've created so many channels to allow for constant communication and updates. I am not group leader but I feel as though I have to be the one to correct errors, fix mistakes and assign tasks.

I'm working on conveying this to my group as I don't feel it is fair that I am "in charge" of the group or assignments of tasks when no such thing is required. The work requires input from everyone including starting conversations or asking questions, not just one person to verify whether someone's work is "good" or up to par.

More motivation is needed to really get the ball rolling but that is only something that seems to be present closer to the due date. I hope it does not continue this way and will do my best to sort this out with the rest of the group.
